

# Tum Create VOI, the Amazing Electric Scooter Prototype

**One of the nicest things about the electric vehicle prototypes is the fact that some of them exhibit striking creative ideas which push the limits of the way we have been used to think into the realm of Sci-Fi. The VOI project is such a vehicle and we salute the whole team at Tum Create for it.**

The Tum Create VOI is a hybrid design, sporting the two-wheeled principle of a scooter, but throwing other "strange" concepts in: rickshaw, rear-seat riding and multi-purpose front rig. The ways the VOI can be used in are only limited by the imagination of the engineers and future owners, but one thing is certain: the potential is huge!

As far as the actual development state is concerned, the VOI offers an 80 km range (50 miles), a top speed of 45 km/h (28 mph), two-up riding, all with 48V 3 kWh batteries. We'll definitely be looking into this some more in the future... because the VOI's future seems bright.

For more on the VOI project, check [TUM Create's webpage](#).
